

Q. How to delete user?

Ans : to delete a user deluser command is used

Q. How to delete a user group group?

-> To delete user from a group we need to use "gpasswd" command

-> syntax sudo gpasswd -d username group_name

-> here -d is used to delete|

=====

=====

How to change a password of user?

-> To change a password we need to use "passwd" command

Case 1: To change your own password

-> To change your own password simply type "passwd" command and press enter.

syntax : passwd

Case 2: Change other user password

syntax: sudo passwd username

If we want to change other users password then sudo permission is required

Case 3: Change root user passwd

syntax : sudo passwd root|

13) What is difference between adduser and useradd command?

-> "useradd" is in build command in linux, that is available in any linux flavour

-> When we use useradd command no extrac information required to provide

-> adduser is not a standard linux command,

-> adduser is a perl script that uses "useradd" command internally

-> When we are creating a user using adduser command then extra information need to provide like - passwd, Full name room number etc

14) sudo command

It is used while root user specific commands we want to execute.

15) How to check the allowed commands by sudo for particular user?

-> use below command

```
sudo -l
```

```
sudo -l -u username : -> To know particular user can execute commands
```

=====

Q. How to give sudo user's right or root user's rights to normal user?

Step 1: `usermod -aG sudo username`
