

Use multiple command in single line

How to use multiple commands in single line?

-> We can use multiple independent commands in a single line by two ways
1) By using semicolon(;) operator
2) By using && operator

1) By using semicolon operator (;

Syntax : command1;command2;command3;commandN

Note: first command 1 get executed and then command 2 get executed followed by rest of command

If any command in the middle get failed , still rest of commands also get executed

Example 1

```
ls;cat -n F2.txt
```

Example 2

```
ls;cat -n F2.txt;cal;date
```

Example 3

```
ls;cat -n F2.txt |head -3;cal;date;pwd
```

2) By using && operator

Syntax : command1&&command2&&command3&&command_N

Execution flow : in which order we have added the command in the same order they get executed. i.e first command 1 get executed then command 2 get executed followed by rest of commands

Note : If any command fails in the middle then rest of commands will not execute

echo command is used to display some message on terminal

syntax : echo 'message String'
