

Task : Insert 5 row into table

- i) table
- ii) Data

Steps to complete given task

1) Create a feature branch on Remote Repository i.e github.com

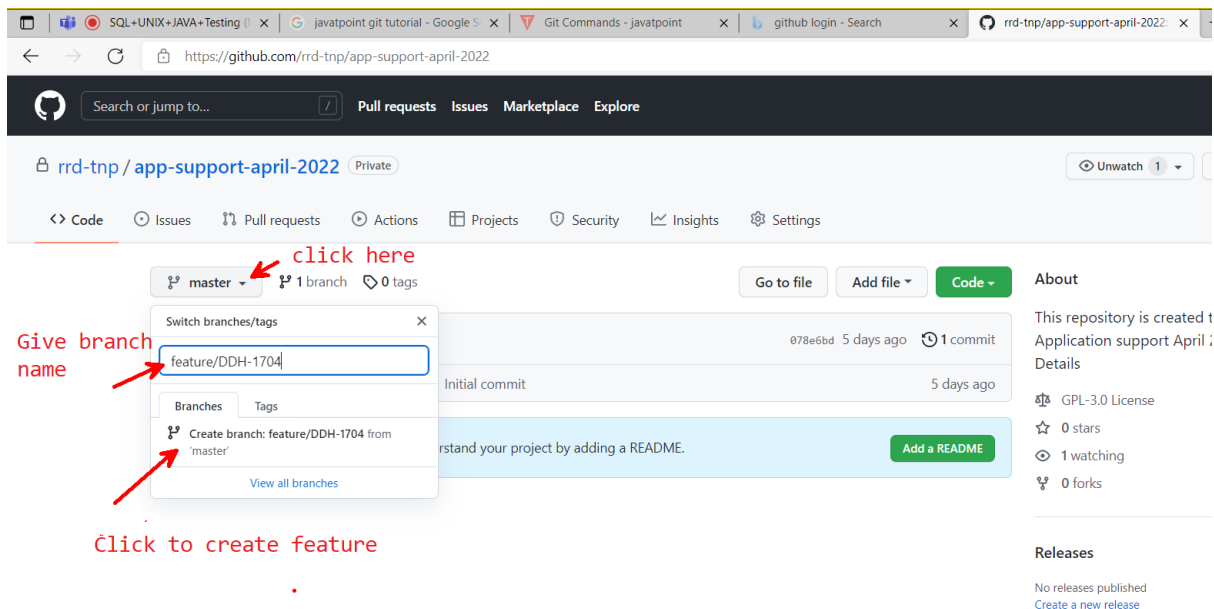

While creating feature branch naming convention is

[feature/Jira_number](#)

Example 1

[feature/CDS-1001](#)

Example 2 [feature/DDH-1704](#)

Step 2: clone that feature branch on your local system

To clone a branch use following command

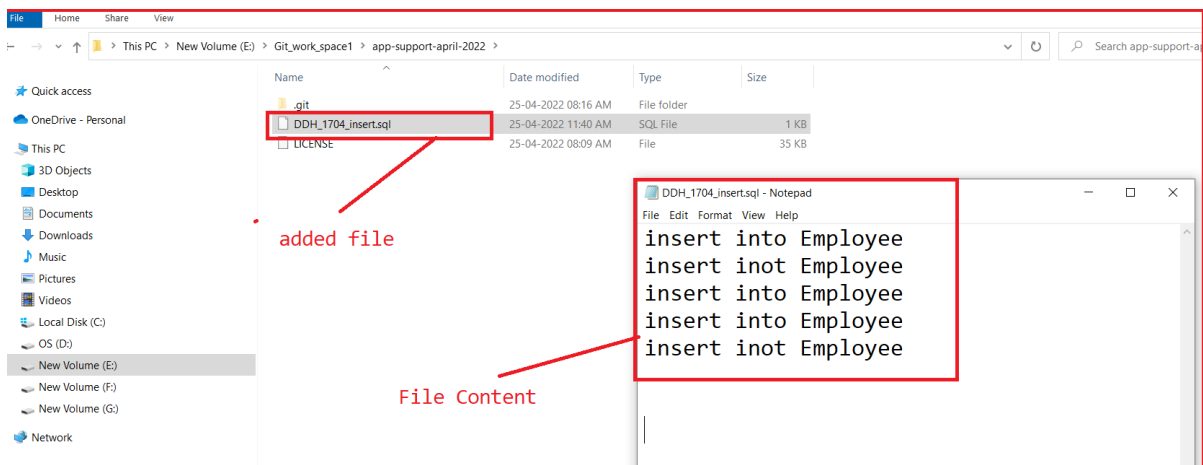

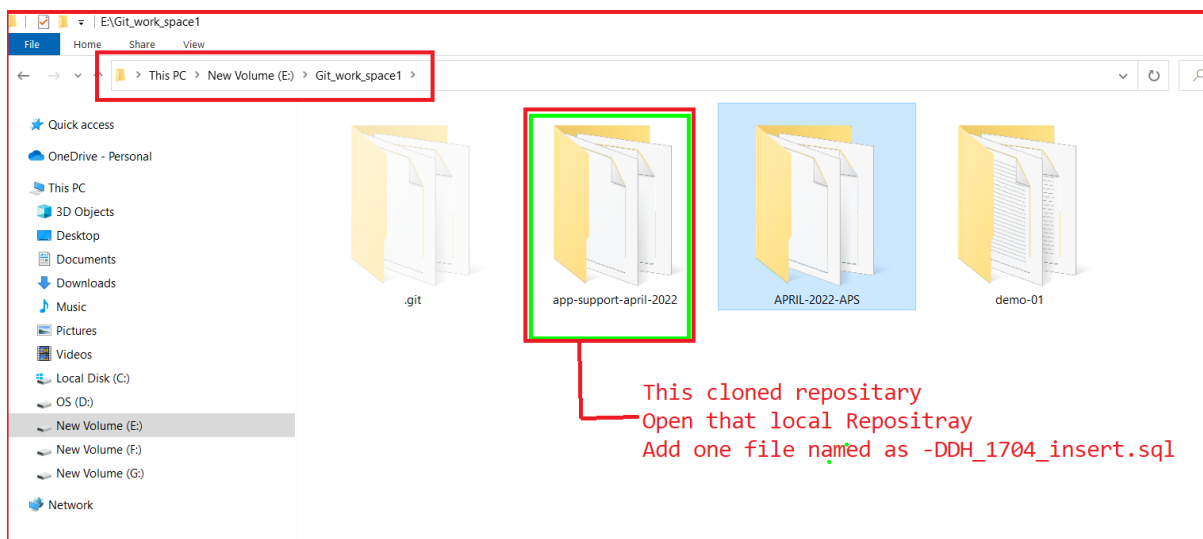

```
git clone -b branch_name remote_repository_url
```

Example 1:

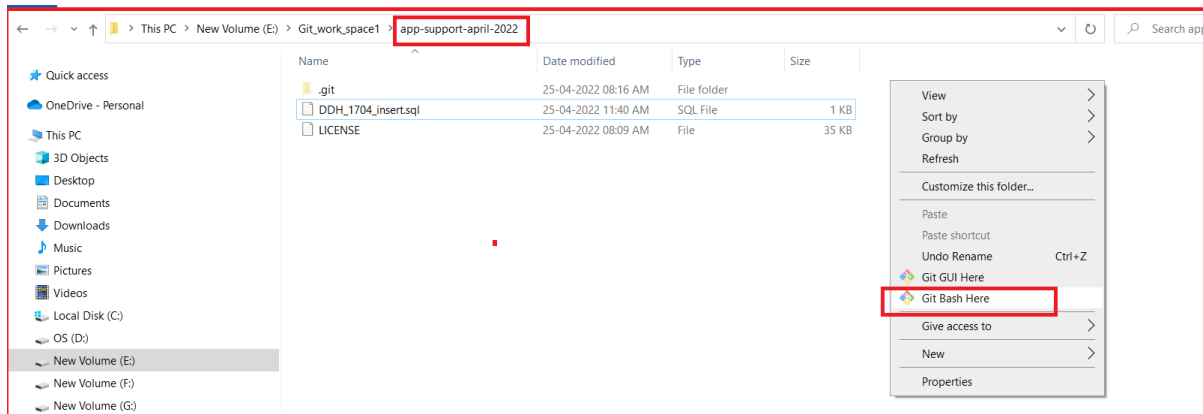

```
git clone -b feature/DDH-1704 https://github.com/rrd-tnp/app-support-april-2022.git
```

Repository name

Step 3 : Go to clone repository

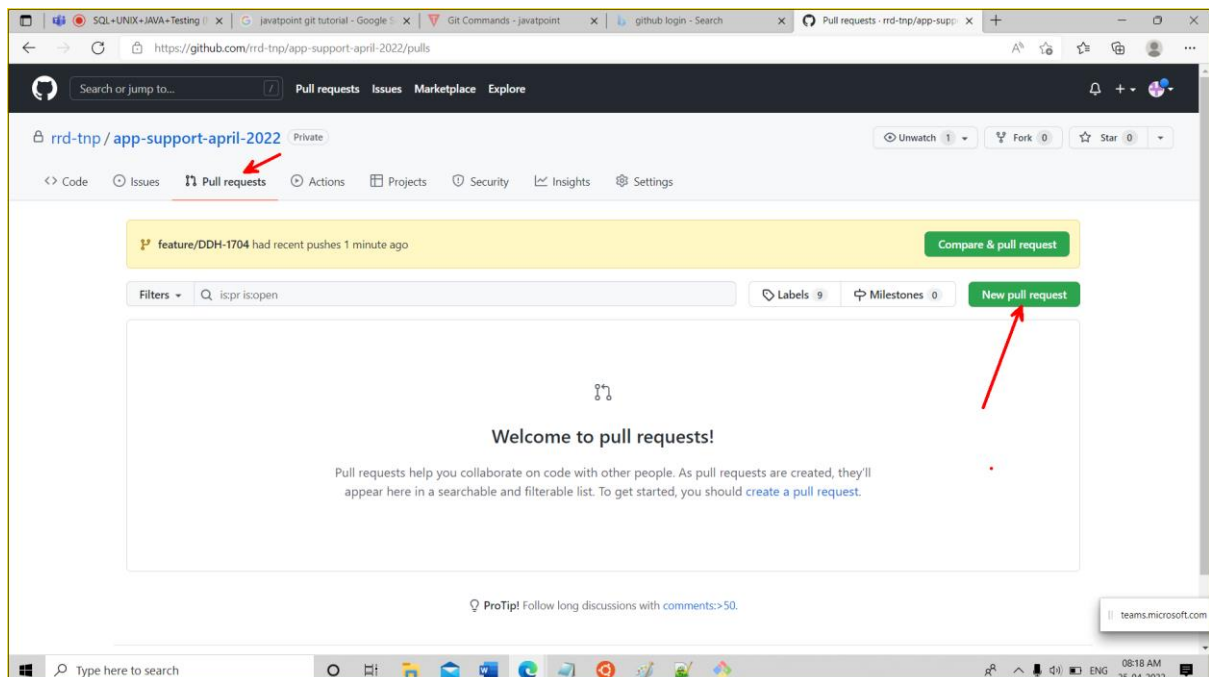

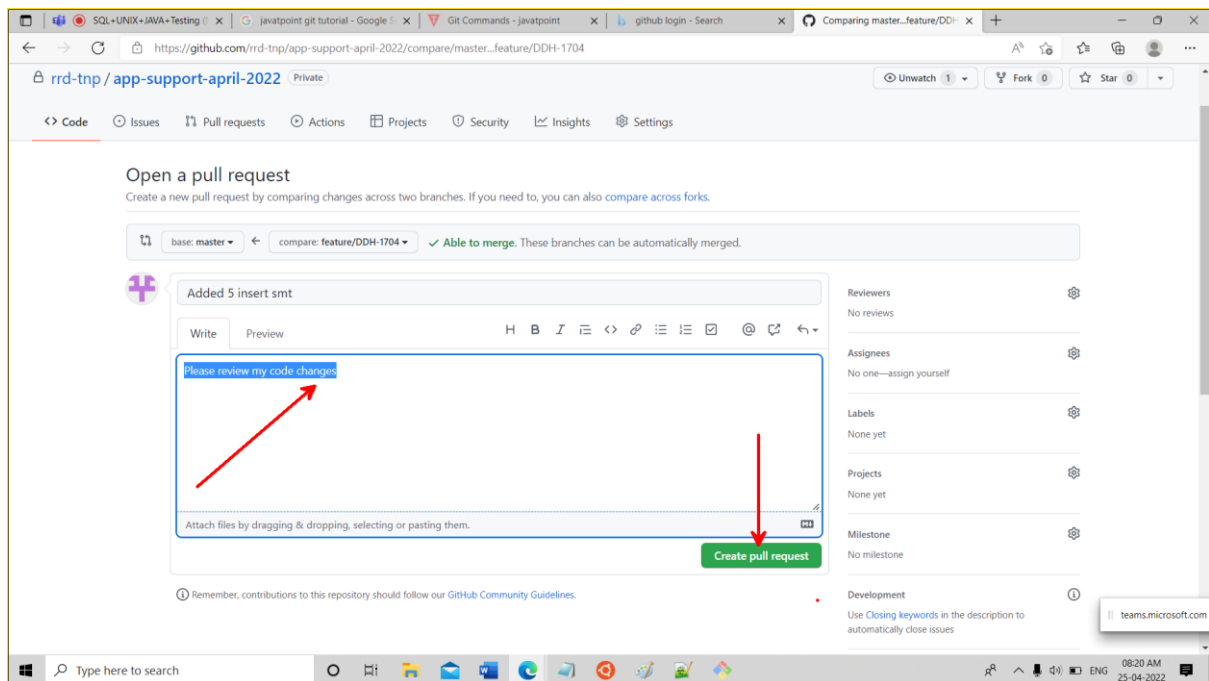

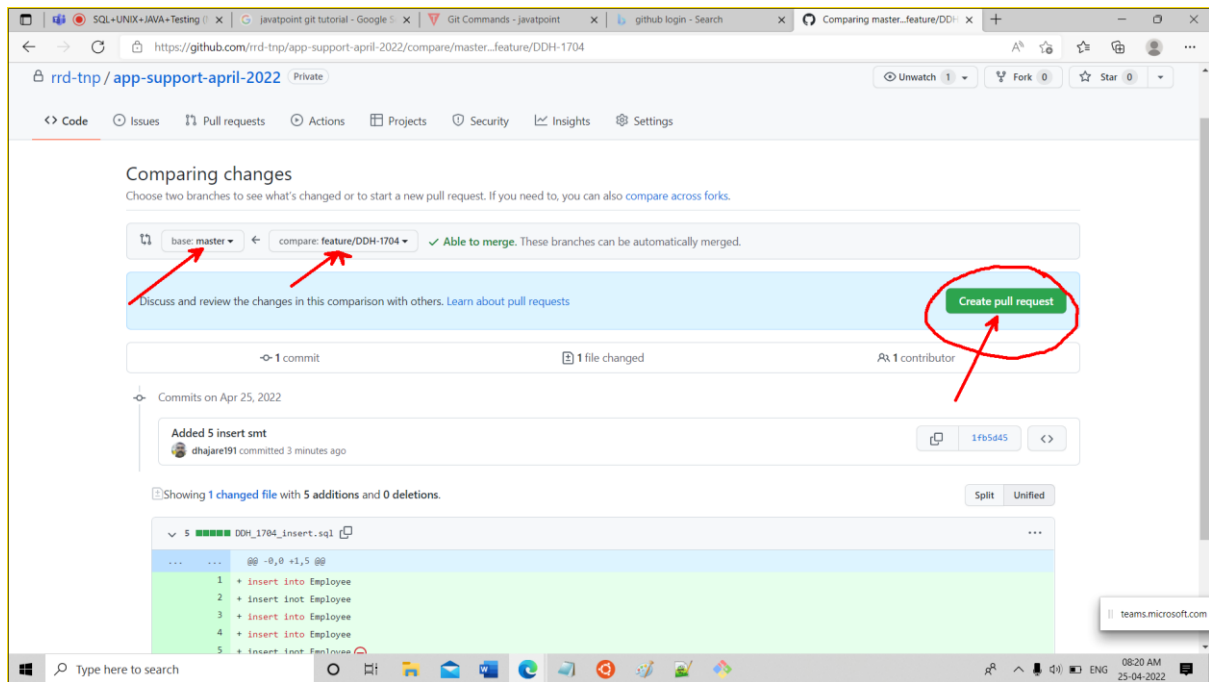

Step 4 : Open git bash in Local repository

Add newly created file in Staging area
add newly created file in local repository
push file from local to central

To Create pull request

Once you click on Create pull request; new pull request gets created. Copy the URL from the address bar, and we can share it with the TL/Manager. Add a review comment on your changes. If the changes are fine, then this pull request is merged into the base branch.
