To drop or to delete a table syntax is

```
drop table table_name;
```

Example : drop a Student table

Ans : drop table Student;

Example : drop a Employee table

Ans: drop table Employee;

If we want to view the table structure then syntax is

```
desc table_name;
```

or

```
describe table_name;
```

Example : Suppose I want to view student table structure

Ans: desc Student;

How to insert data into table?

-> To insert data into table "insert into"
   command is used

 -> Syntax
  Case 1: If we want to insert complete row
          i.e all columns values

insert into table_name values(col_1value,
                               col_2_value,
                               col_3_value
                               );

Student

rollno	sname	mark	div
100	Robin	90	A

Example

insert into Student values(100,'Robin',90,'A');

 insert into student values(101,'Martin',80,'B');

Note
1) For numeric type value single quote is not required

2) For char type type value sinlg equote is required,
   by mistake if you miss single quote then query will
   give an error.

3) If we are executing insert,update and delete query
   on command prompt then auto commit is disabled so
   that we need to commit insert,update and delete
   operation manualy.

To commit insert, update and delete operation
manually we need to use below command

commit;

If we want to view/display data from a table then
use below query

select * from table_name;

Example : I want to display student table data

Ans: select * from Student;
